

# Django

1. What is Django, and how does it differ from other web frameworks?
2. Explain the MVT (Model-View-Template) architecture in Django.
3. How does Django handle database migrations, and why are they important?
4. What is Django's ORM, and how does it simplify database operations?
5. What is Django's context processor, and how is it used?
6. How do you use template tags and filters?
7. How would you extend a base template in Django?
8. Create a basic Django project and set up a simple app that displays "Hello, World!" on the homepage.
9. Build a model for a blog post that includes fields for the title, content, and publication date. Then, create a migration and apply it.
